

The Garage Store Assembly Instructions

Product: FlexiPanel

These instructions are designed to help you install our FlexiPanel on your wall.

Package Contents:

- Each length of FlexiPanel is either 1200mm or 2400mm in length and comes with white headed screws.
- Trim can be purchased separately. If you are planning to use trim please leave 40mm between the end of the panel and the left and right vertical back clip.

Tools Required:

- Drill with 6mm Phillips driver bit
- SDS / Hammer Drill (If going into brick) and relevant drill bit
- Stud finder (or small brad nails)
- Spirit level and pencil
- Safety glasses
- Rawl Plus and Fixings for Back Clips

The Garage Store Assembly Instructions

Step 1: Mark out the area where you wish to install your FlexiPanel. To do this, place the Spirit Level at the desired height where you wish the FlexiPanel to sit ensuring it is level and mark your line with a pencil. Continue along that line ensuring it is continuously level for the length of your desired FlexiPanel area.

Step 2: Screw the back clips to the wall making sure they are touching and are level with your line across the top.

The Garage Store Assembly Instructions

Top Tip: For every piece of 2400mm FlexiPanel you will require 4 x back clips spaced at 800mm. For every 1200mm piece of FlexiPanel you will require 3 x back clips spaced at 600mm.

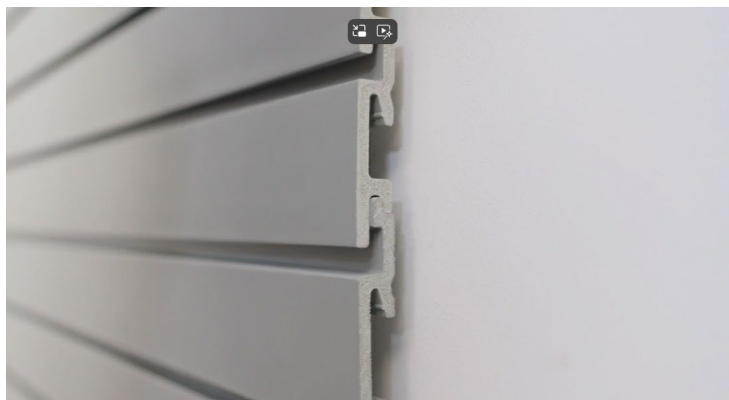

Note: If fixing into timber studs screw through the top hole of clip but not all the way in. Ensure the back clip is level vertically and then tighten screw and repeat on bottom hole on the back clip. For maximum holding capacity ensure you fix a screw in every hole of back clip.

If fixing into brick or block work mark the holes on the back clip against the wall whilst ensuring the back clip is level. Using your SDS/Hammer drill, drill a hole using the suitable size for the Rawl plugs you are using. Then fix back clip to wall.
